ABSTRACT

This report summarizes information about public elementary and secondary schools and local education agencies in the United States during the 2001-2002 school year. The information is provided by state education agencies through the Common Core of Data survey system. States reported 94,112 public elementary and secondary schools in the 2001-2002 school year, an increase of more than 11% from the totals for fall 1991. Most of these (985) were regular schools, but others focused on special education, vocational/technical education, or alternative programs. About 85% of local education agencies were those typically thought of as "school districts," operated by a local school board. About 8% were supervisory unions or regional education service agencies, and around 7% were operated directly by a state or federal government agency or some other entity. In the 2001-220 school year, the public schools provided instruction to 47.7 million students. Five states enrolled more than two million students in their schools, but, at the other end of the spectrum, the District of Columbia and Wyoming reported fewer than 100,000 students. Schools came in all combinations of grades, and primary schools tended to be smaller than middle schools or high schools. However, student-teacher ratios were higher in the elementary schools, with a median of 16.0 students per teacher. The majority of schools (57%) were in large of midsize cities or accompanying urban fringe areas. These schools accounted for more than two-thirds of all public school students. The report also contains some information on other school characteristics. An appendix contains supplemental tables. (Contains 19 tables.)(SLD)

The National Center for Education Statistics (NCES) is the primary federal entity for collecting, analyzing, and reporting data related to education in the United States and other nations. It fulfills a congressional mandate to collect, collate, analyze, and report full and complete statistics on the condition of education in the United States; conduct and publish reports and specialized analyses of the meaning and significance of such statistics; assist state and local education agencies in improving their statistical systems; and review and report on education activities in foreign countries.

NCES activities are designed to address high priority education data needs; provide consistent, reliable, complete, and accurate indicators of education status and trends; and report timely, useful, and high quality data to the U.S. Department of Education, the Congress, the states, other education policymakers, practitioners, data users, and the general public.

We strive to make our products available in a variety of formats and in language that is appropriate to a variety of audiences. You, as our customer, are the best judge of our success in communicating information effectively. If you have any comments or suggestions about this or any other U.S. Department of Education, National Center for Education Statistics product or report, we would like to hear from you. Acknowledgments

This report was improved by the suggestions of the reviewers, Christopher Cross of the Center on Education Policy, Steven Marangos of the Louisiana Department of Education, Rick Cloud of the Connecticut Department of Education, and Charlene Hoffman and Frank Morgan of NCES. Bruce Taylor of NCES, whose careful review was much appreciated, chaired the adjudication. Beth Young and Tai Phan of NCES, and Jennifer Sable and Michael Planty of the Education Statistics Services Institute, ensured the quality of the information and the analyses. Julia Naum of the U.S. Bureau of the Census prepared the tables, and Susan Baldridge, Pinkerton Computer Consultants, Inc., formatted the final document.

A-8 Number and percentage of students, by community type and by state: School year 2001–02 46

This report summarizes information about public elementary and secondary schools and local education agencies in the United States during the 2001–02 school year. The information is provided by state education agencies through the Common Core of Data (CCD) survey system.

Types of Public Schools and Agencies

States reported 94,112 public elementary/secondary schools in the 2001–02 school year (table A).[1] This was an increase of more than 11 percent over the 84,578 schools reported in the fall of 1991. (Comparisons with 1991 are based on table 89 in Snyder and Hoffman, 2002.). Most of these were regular schools, those that offer a comprehensive curriculum and may provide other programs and services as well. A smaller number of schools focused primarily on special education, vocational/technical education, or alternative programs. Students in these specialized schools were often enrolled in a regular school as well and were reported as part of the membership of either the regular or the special school, but not both. Note that two-thirds of the vocational schools identified in table A, as well as smaller proportions of other types of schools, do not report students in membership. (See Key Terms for more information about school types.)

Table A. Public elementary and secondary schools in the United States: 2001–02

	Total	Regular	Special	Vocational	Alternative
Total schools in United States	94,112	85,619	1,987	1,023	5,483
Reporting students	91,380	84,919	1,641	328	4,492
Not reporting students	2,732	700	346	695	991

NOTE: Data include the 50 states and the District of Columbia.

SOURCE: U.S. Department of Education, National Center for Education Statistics, Common Core of Data (CCD), "Public Elementary/Secondary School Universe Survey," 2001–02.

Among the 91,380 schools that reported students in membership, 98 percent were regular schools (derived from table 1). The second largest category with student membership was that of alternative education schools (1 percent) followed by special education schools and vocational schools (0.4 percent each).

School districts and other types of agencies. Most local education agencies are those that are typically thought of as "school districts." Operated by a local school board, they provide instructional services for students and comprised 85 percent of local agencies in 2001–02 (table 2). A smaller proportion, 8 percent, were supervisory unions or regional education service agencies whose major responsibility is to offer administrative, special program, testing, or other services to school districts. Finally, around 7 percent of the reported agencies were operated directly by a state or federal government agency or were other than any of the preceding categories. The number of regular school districts decreased by 4 percent from the 15,173 reported in 1991 to a total of 14,559 in 2001–02.

[1]CCD respondents include the 50 states, the District of Columbia, the Department of Defense Dependents Schools, the Bureau of Indian Affairs, and the five outlying areas (American Samoa, Commonwealth of the Northern Mariana Islands, Guam, Puerto Rico, and the U.S. Virgin Islands). Totals in this report are limited to the 50 states and the District of Columbia, referred to collectively as "the states."

Charter school districts. The governance of charter schools varies from state to state. In some cases they are not considered under the administration of the regular public school district within whose boundaries they operate. In these cases, each charter school is reported on the CCD with its own local education agency. These agencies are reported under the category of "other agency." For example, in the District of Columbia the establishment of 33 charter schools explains why the District is shown with 34 total agencies on table 2. Fully 960 of the other agencies shown on table 2 are charter school districts.

Student Membership

In the 2001–02 school year, 91,380 public schools provided instruction to 47.7 million students in the United States (table 1). Five states (California, Florida, Illinois, New York, and Texas) each enrolled more than 2 million students in their public schools. At the other end of the size distribution, the District of Columbia and Wyoming reported fewer than 100,000 students.

Most of the 2001–02 students, 98 percent, were reported enrolled in regular schools. One percent were in alternative schools. Special education or vocational schools each accounted for less than one-half of 1 percent of students. Kansas, Mississippi, New Hampshire, North Dakota, and Oklahoma reported only regular schools.

Instructional Level

Schools come in all combinations of grades. To allow comparisons across states, instructional level is determined in this report by the lowest and highest grade in a school. Among the 91,380 schools with membership during the 2001–02 school year, 58 percent spanned the primary grades, beginning with prekindergarten or kindergarten and going no higher than grade 8 (table 3; see Key Terms for complete definitions of instructional levels). The proportion of students who were enrolled in primary schools averaged 49 percent across all states, ranging from 42 percent in Alaska to 59 percent in the District of Columbia.

Middle schools, those with grade spans ranging from as low as grade 4 to as high as grade 9, made up 17 percent of schools with students. High schools (low grade of 7 or higher, high grade of 12) accounted for an additional 19 percent of schools. Some 6 percent of schools had a grade configuration that did not fit into any of these three categories.

A total of 14,229 regular school districts were reported to have students in membership for 2001–02 (table 4). As with the instructional levels of schools, grade span categories of school districts were assigned by the lowest and highest grades offered. Approximately 75 percent of school districts included the comprehensive range of grades from prekindergarten, kindergarten, or grade 1 to 9 or higher, and they accounted for 92 percent of all public school students. These comprehensive school districts accounted for all, or all but one, of the districts in 17 states. (In fact, only in Arizona, Illinois, Montana, and Vermont did as many as one-third of the students attend school districts with other grade spans.) A little more than 5 percent of students were in districts with no grade higher than 8, and about 2 percent were in secondary districts with no

grade lower than 7. Less than 1 percent of students were enrolled in districts with some other range of grades.

Tables A-6 and A-7 provide more details about the distribution of regular public school districts by grade span.

School and School District Size

Primary schools tended to be smaller than middle and high schools (table 5). The average number of students in a primary school was 441 in 2001–02. Middle schools served, on the average, 612 students each, while the average-size high school had 753 students. There was considerable range in school size across the states. High schools ranged from an average of fewer than 300 students in Montana, North Dakota, and South Dakota to more than 1,500 students in Florida.

Student/teacher ratios were higher in primary schools, which had a median number of 16.0 students for each teacher, than in middle or high schools, which had a median number of 15.7 and 15.1 students per teacher, respectively (table 6). (The median is the point at which half the schools had larger student/teacher ratios and half had smaller. Note also that student/teacher ratio is not the same as average class size, since not all teachers are assigned to a classroom.) The median number of primary students for each teacher ranged from a low of fewer than 13.0 in Montana, Nebraska, North Dakota, South Dakota, Vermont, and Wyoming to a high of 21.5 in Utah.

Twenty-five school districts enrolled 100,000 or more students, while 1,692 districts served fewer than 150 students (table 7). While few in number, the larger districts included a considerable portion of the students in America's schools. Although less than 2 percent of school districts reported 25,000 or more students, one-third (33 percent) of students attended school in these districts. At the other end of the size range, more than one-third of school districts had fewer than 600 students, but these districts accounted for only 3 percent of public school enrollment.

Tables A-1 through A-5 provide more detailed information about the distribution of schools and school districts by membership size.

Other School Characteristics

The majority of schools, 57 percent, were in large or midsize cities or their accompanying urban fringe areas (table 8). These schools accounted for more than two-thirds (69 percent) of all public school students. About 1 of every 6 students was in a large city school in 2001–02; a smaller proportion, about 1 in 10, attended a rural school that was not within a metropolitan statistical area (MSA) (see appendix table A-8).

Title I schools. Table 9 shows the number of Title I eligible schools by state, and the number of these that have schoolwide Title I programs. Three states did not indicate which of their schools were eligible for Title I services. Among those states that could provide this information, the

District of Columbia, Kentucky, Mississippi, Montana, and South Dakota reported that more than 7 out of 10 public school students were in Title I eligible schools. More than half of the students were enrolled in schools with schoolwide Title I programs schools in the District of Columbia, Mississippi, and Texas.

Magnet schools. States were asked to identify magnet schools. Forty-five states were able to report magnet school information (table 9). Of these, 28 states had at least one magnet school, 2 states reported no magnet schools and an additional 13 reported that the category of magnet schools was not applicable in their state. Two of the 45 states reported magnet status for less than 80 percent of their schools and are not included in this distribution. California and Illinois reported the greatest number of magnet schools, 456 and 420, respectively. Illinois served 15 percent of its students in magnet schools; in California, the figure was 9 percent.

Charter schools. Thirty-nine states (including the District of Columbia) recognized charter schools in 2001–02. Of this group, 37 reported having one or more charter schools in operation (table 9). The number of schools ranged from a single charter school in Indiana, Maine, and Mississippi to more than 300 in Arizona and California. In the District of Columbia, charter schools enrolled almost 9 percent of all public school students.

Student Program Participation and Selected Characteristics

Nationally, 13 percent of public school students had a Special Education individualized education program (IEP) in 2001–02 (table 10). Among those states reporting students with IEPs, the proportion ranged from 10 percent in Colorado to 20 percent in Rhode Island.

Some 47 states (including the District of Columbia) reported the number of students who were English language learners (ELL) and receiving English language services. In California, there were 1.5 million ELL service recipients (one-fourth of all students) in 2001–02, while Texas reported more than half a million (one in seven students) receiving ELL services.

Forty-one states (including the District of Columbia) provided information about the number of migrant students enrolled during the 2000–01 school year or the following summer. Because a single migrant student may enroll in several schools during the year, this is a duplicated count of students. Therefore, table 10 cannot estimate the proportion of students who were migrants. California reported the greatest number of migrant students served when regular school year and summer program participants were combined, almost 331,000.

All but four states reported the number of students eligible for free or reduced-price meals. More than half of all students were eligible for this program in the District of Columbia, Louisiana, Mississippi, New Mexico, and West Virginia. The largest numbers of students eligible for free or reduced-price meals were in California, Texas, and New York, with 2.9, 1.9, and 1.2 million eligible students, respectively.

Table 11 shows the distribution of minority students (all groups except White, not Hispanic; see Key Terms) across cities, urban fringe areas, and small towns or rural communities in 2001–02. Across the United States, about 39 percent of public school students were members of minority

groups. Sixty-three percent of students in large or midsize city schools were minority students, while only 21 percent of students in small town and rural schools were. In the large or midsize city schools of nine states and the District of Columbia, three-fourths or more of students were minority group members. The proportion was highest in the District of Columbia, in which 87 percent of students were minority members. Small town and rural schools tended to have smaller proportions of minority students, but this was not the case for all states. In the small town and rural schools of Arizona, Hawaii, Mississippi, and New Mexico, half or more of the students were minority group members. (The District of Columbia is not included in this list because it operates only a single school outside the District's boundaries.)

Table 1. Number of public elementary and secondary schools with membership and percentage of students in membership, by type of school and by state: School year 2001–02

State	Number of schools having membership	Total students	Type of school: Regular, Number of schools	Regular, Percentage of students	Special education, Number of schools	Special education, Percentage of students	Vocational education, Number of schools	Vocational education, Percentage of students	Alternative education, Number of schools	Alternative education, Percentage of students

#Rounds to zero.

NOTE: Table excludes 2,753 schools (21 of these in outlying areas) for which no students were reported in membership. U.S. totals include the 50 states and the District of Columbia. Although type of school is a mutually exclusive category, many regular schools include special, vocational, or alternative education programs. Detail may not sum to total because of rounding. Total student membership is reported from the "State Nonfiscal Survey of Public Elementary/Secondary Education."

[1]Regular school districts include those that are components of supervisory unions.

[2]DoD and BIA agencies are federal agencies, as is one additional agency in Virginia. Charter school agencies make up 960 of the other agencies. For example, the District of Columbia reports each charter school as a separate agency.

NOTE: Detail may not sum to total because of rounding. U.S. totals include the 50 states and the District of Columbia.

#Rounds to zero.

NOTE: Instructional levels are primary (low grade prekindergarten to 3, high grade up to 8); middle (low grade 4 to 7, high grade 4 to 9); high (low grade 7 to 12, high grade 12 only); and other (any configuration not falling within the previous three, including ungraded schools). For states that did not provide a grade span, grade span was determined by the highest and lowest grades in which students were reported. Table excludes 2,753 schools (21 in outlying areas) for which no students were reported in membership. U.S. totals include the 50 states and the District of Columbia. Detail may not sum to total because of rounding.

SOURCE: U.S. Department of Education, National Center for Education Statistics, Common Core of Data (CCD), "Public Elementary/Secondary School Universe Survey," 2001–02.

#Rounds to zero.

*Table includes 26 Department of Defense and 24 Bureau of Indian Affairs school districts that are technically federally operated agencies; this is in order to report data for these agencies in the table.

NOTE: For states that did not provide a grade span, grade span was determined by the highest and lowest grades served among all schools associated with the district. "Other" includes all grade configurations not reported in the specified categories and includes ungraded districts. Table excludes 330 regular school districts for which no students were reported in membership. U.S. totals include the 50 states and the District of Columbia. Detail may not sum to total because of rounding.

---Not available.

*Total of reporting states, does not include Massachusetts or Tennessee.

NOTE: Instructional levels are primary (low grade prekindergarten to 3, high grade up to 8); middle (low grade 4 to 7, high grade 4 to 9); high (low grade 7 to 12, high grade 12 only); and other (any configuration not falling within the previous three, including ungraded schools). For states that did not provide a grade span, grade span was determined by the highest and lowest grades in which students were reported. U.S. totals include the 50 states and the District of Columbia. If all schools were ranked by student/teacher ratio from smallest to largest, half of the schools would fall below the median. For example, half the primary schools in Alabama had a student/teacher ratio of less than 14.8.

#Rounds to zero.

[1]Reporting states totals exclude states for which data were missing for 20 percent of more of the schools or districts.

[2]Number of Title I eligible schools includes those with and without schoolwide Title I programs.

[3]Zero indicates that this type of school is authorized but none were operating.

[4]Data were missing for more than 20 percent of schools.

[5]Membership data were missing for 5 of the 33 charter schools in the District of Columbia.

NOTE: Percentages are based on all schools reporting in a state. Numbers of schools include those not reporting students in membership. U.S. totals include the 50 states and the District of Columbia.

SOURCE: U.S. Department of Education, National Center for Education Statistics, Common Core of Data (CCD), "Public Elementary/Secondary School Universe Survey," 2001–02.

#Rounds to zero.

[1]Reporting states totals exclude states for which data were missing for 20 percent or more of the schools or districts.

[2]Migrant students include those who were enrolled at any time during the previous (2000–01) regular school year. They are reported for each school in which they enrolled; because this is a duplicated count, the table does not show migrants as a percentage of all students.

[3]American Samoa did not report students eligible for reduced-price meals. See technical notes.

[4]Data were missing for more than 20 percent of schools or districts.

NOTE: IEP is the acronym for individualized education program. ELL is the acronym for English language learner. Some data items were more likely to be missing from charter schools than from other schools. Free lunch data were missing for 625 of 2,348 charter schools, and migrant student data were missing for 682. Data on ELL students were missing for 110 of the total 989 charter school districts. Percentages are based on schools and agencies reporting. Detail may not sum to total because of rounding. U.S. totals include the 50 states and the District of Columbia.

[1]Total of reporting states, does not include Tennessee.

[2]Racial/ethnic data were not reported for the 28 charter schools in the District of Columbia.

[3]Represents one school located in a small town locale outside the District of Columbia.

NOTE: Minority includes all groups except White, not Hispanic. Community types classify the location of a school relative to populous areas. See Key Terms for definitions of locale codes. Percentages are based on schools reporting. U.S. totals include the 50 states and the District of Columbia.

SOURCE: U.S. Department of Education, National Center for Education Statistics, Common Core of Data (CCD), "Public Elementary/Secondary School Universe Survey," 2001–02, and "State Nonfiscal Survey of Public Elementary/Secondary Education," 2001–02.

Technical Notes

The *Public Elementary/Secondary School Universe* and the *Local Education Agency Universe Surveys* are annual state-level collections of information about the numbers and types of public schools and education agencies, the numbers and selected characteristics of students, and the numbers of dropouts, high school completers, and education staff. These two surveys also include directory information such as school and agency names, addresses, and telephone numbers. The School and Agency Surveys are part of the Common Core of Data (CCD) collection of the National Center for Education Statistics. All of the CCD surveys use information reported by state education agencies.

Enrollments. Because some students may receive a public education outside a local school district or school (for example, may attend a state-operated residential school), the numbers of students reported on the CCD school or local education agency surveys are not used as the official state totals in CCD publications. The total numbers of students shown in tables 1 and 11 of this publication are those reported on the 2001–02 *State Nonfiscal Survey of Public Elementary/Secondary Education*. However, the percentages of students shown in the tables are based on the School or Agency Survey.

A student cannot be reported in the membership counts of more than a single school on the CCD. Students who are dually enrolled in a regular school and a vocational school, for example, can only be reported among the membership of one of these schools. It should be noted that this report excludes a disproportionately high number of vocational schools for which enrollment presumably is attributed to a regular school.

Missing data. Not all states collect and report all of the data items requested on the CCD surveys. NCES imputes (replaces a nonresponse with a plausible value) some missing items on the State Nonfiscal Survey. Imputations were not used in this report for the School and Agency Surveys. Missing information is treated differently within individual states and across all states as a whole. An individual state is considered to have missing data if an item is reported by less than 80 percent of its schools or agencies. For example, table 11 shows missing data for Tennessee, which did not report minority student enrollment on the Agency Universe, although this was reported at the state level so that the total numbers of students and minority students could be reported. However, when information is missing for no more than 5 percent of cases across the United States, NCES calculates totals and identifies them as totals for reporting states rather than the United States. For example, table 11 sums the number of minority students reported, because the missing Tennessee data represented less than 5 percent of all students nationwide.

Data quality. Staff at NCES and its collection agent, the Bureau of the Census, edit all CCD reports and ask state CCD Coordinators to correct or confirm any numbers that appear out of range when compared with other states or with the state's reports in previous years. Tables include footnote explanations for any seemingly anomalous numbers.

Additional follow-up checks were carried out for two items. States were asked to reconfirm any missing or not applicable entries for Title I school or magnet school status. Each state that was contacted provided the requested confirmation or correction.

Key Terms

A *public school* provides educational services to students, has an assigned administrator, receives public funds as its primary support, and is operated by an education agency. A single school may operate at multiple locations (for example, an urban "storefront school" for potential dropouts with a single principal responsible for programs at several addresses). Multiple schools may operate at the same location, as is the case when a kindergarten–grade 12 building has both an elementary and a high school principal. Except in table A, this report excluded 2,732 schools in the states (and 21 in the outlying areas) that did not report any students in membership for the 2001–02 school year.

Regular schools do not focus primarily on special, vocational, or alternative education, although they may offer these programs in addition to the regular curriculum. A *special education school* focuses primarily on special education, with materials and instructional approaches adapted to meet the students' needs. A *vocational education school* focuses primarily on vocational, technical or career education and provides education or training in at least one semiskilled or technical occupation. An *alternative education school* addresses the needs of students that typically cannot be met in the regular school setting, and provides nontraditional education.

Title I schools are designated as eligible for participation in programs authorized by Title I of Public Law 107-110, the Elementary and Secondary Education Act of 2002. Those with *schoolwide programs* are schools in which all students have been designated by state and federal regulations as eligible for participation in Title I programs.

Magnet schools are those designed to attract students of different racial/ethnic backgrounds for the purpose of reducing racial isolation, or to provide an academic or social focus on a specific theme (e.g., performing arts).

Charter schools provide free public elementary/secondary education under a charter granted by the state legislature or other appropriate authority.

Membership is the annual headcount of students enrolled in school on October 1, or the school day closest to that date. In any given year, some small schools will not have any pupils. And, in reporting to the CCD, states assign students who attend more than one school to a single school rather than prorating students across all the schools they attend.

Instructional levels are calculated from the lowest and highest grades for which students are reported in a school. Primary schools are those with a low grade of prekindergarten through grade 3 and a high grade of up to 8. Middle schools contain a low grade of 4 to 7 and a high grade ranging from 4 to 9. (A 4th grade center would be counted as a middle school.) High schools have a low grade of 7 to 12 and must extend through grade 12. All other grade configurations, including schools that are completely ungraded, are grouped under the heading of "other."

IEP counts are reported at the school district level and reflect the numbers of students with individualized education programs under the Individuals with Disabilities Education Act (IDEA)–Part B.

Free or reduced-price meal eligibility is the number of students in a school who indicate that they are eligible to receive free or reduced-price meals under the National School Lunch Act.

Limited English proficient students are those served in appropriate programs of language assistance (e.g., English as a Second Language, High Intensity Language Training, bilingual education). Does not include students enrolled in programs to learn a language other than English. Students may be referred to as English Language Learners.

Migrant students are those whose parents or guardians are employed on a seasonal or temporary basis for agricultural or fishery work, and who have established a temporary residence for this purpose.

The *race/ethnicity* categories used in the CCD are American Indian/Alaskan Native; Asian/Pacific Islander; Black, not Hispanic; Hispanic; and White, not Hispanic. They are mutually exclusive. *Minority* students, in this report, include all categories except White, not Hispanic.

School locale code is assigned on the basis of the school's physical address, or mailing address, if the former is not reported. The locale code categories are:

- Large city—central city of a metropolitan statistical area (MSA) or consolidated MSA (CMSA), with a population of at least 250,000.
- Midsize city—central city of an MSA or CMSA, with a population less than 250,000.
- Urban fringe of a large city—any incorporated place, Census-designated place (CDP), or non-place territory within a CMSA or MSA of a large city and defined as urban by the U.S. Bureau of the Census.
- Urban fringe of a midsize city—any incorporated place, CDP, or non-place within a CMSA or MSA of a midsize central city and defined as urban by the U.S. Bureau of the Census.
- Large town—an incorporated place or CDP with a population of at least 25,000 and located outside a CMSA or MSA.
- Small town—an incorporated place or CDP with a population between 2,500 and 24,999 and located outside a CMSA or MSA.
- Rural—any incorporated place, CDP, or non-place territory designated as rural by the U.S. Bureau of the Census; excludes places that are within an MSA.

- Rural Urban Fringe—any place meeting the definition for rural that is within an MSA.

Regular school districts are agencies responsible for providing free public education for school-age children residing within their jurisdiction. This category excludes local supervisory unions that provide management services for a group of associated school districts, although it includes the "component" districts that receive these services. The category also excludes regional education service agencies that typically provide school districts with research, testing, or data processing services; state and federally operated school districts; and other agencies that do not fall into these groupings. Most states reported education agencies that administered only charter schools under this last category. There were 2,526 agencies not considered regular school districts in 2001–02; 1,473 of these reported students and 1,053 did not. This report also excluded 330 regular school districts that did not report any students in membership for the 2001–02 school year. This condition can occur when a small district has no pupils or contracts with another district to educate the students under its jurisdiction.

Virgin Islands	33	565	87	187	347	532	649	895	1,758

NOTE: Table excludes regular schools for which no students were reported in membership. U.S. totals include the 50 states and the District of Columbia. The mean is the average. If all schools were ranked by size from the smallest to largest, half of the schools would fall below the median. For example, dividing the total number of students by the total number of schools yields an average school size of 549 (mean) while half of the schools in the United States have 457 or fewer students (median). The percentile indicates what percent of cases a value exceeds; for example, 10 percent of schools have fewer than 138 students.

†Not applicable.

*Table includes 26 Department of Defense and 24 Bureau of Indian Affairs school districts that are technically federally operated agencies; this is in order to report data for these agencies in the table.

NOTE: Distributions cannot be calculated for states and outlying areas that have a single district. Table excludes agencies for which no students were reported in membership. U.S. totals include the 50 states and the District of Columbia. The mean is the average. If all districts were ranked by size from smallest to largest, half of the districts would fall below the median. For example, dividing the total number of students by the total number of districts yields an average district size of 3,297 students (mean), while half of the districts in the United States have 1,064 or fewer students (median). The percentile indicates what percent of cases a value exceeds; for example, 10 percent of districts have fewer than 123 students.

[1] "Grades not reported" includes 00-00 (no students).
[2] Table includes 26 Department of Defense and 24 Bureau of Indian Affairs school districts that are technically federally operated agencies; this is in order to report data for these agencies in the table.
NOTE: U.S. totals include the 50 states and the District of Columbia. Table includes districts for which no students were reported in membership.
